Allowable Subject Matter

1. Claims 8-10, 13 and 14 are allowed.
2. The following is an examiner's statement of reasons for allowance:

[Claim 8]: A method of driving a photosensitive device having a matrix of photosensitive pixels distributed at the intersections of rows and columns of the matrix, the method comprising: subjecting the matrix to an image cycle that includes a resetting phase prior to an image acquisition phase, wherein rows of the matrix are distributed in several groups; during the resetting phase, resetting all the rows of any one group simultaneously; and resetting each group of rows in succession wherein all the rows in any one group are disjoint, and the distribution of the rows in a group form a comb and wherein rows forming a group are uniformly spaced apart with a pitch equal to $\alpha = N/n$, where N is the total number of rows of the matrix, n is the number of rows per group, $\alpha > 1$, and wherein the comb is moved at least $\alpha - 1$ times so as to scan all of the rows of the matrix.

The prior art fails to teach rows forming a group are uniformly spaced apart with a pitch equal to $\alpha = N/n$, where N is the total number of rows of the matrix, n is the number of rows per group, $\alpha > 1$, and wherein the comb is moved at least $\alpha - 1$ times so as to scan all of the rows of the matrix. The word "comb" is defined in the specification (paragraph 32) as the N rows of the matrix are shown as short lines. The rows of the first group are shown as taller lines and these form teeth of the comb. Each tooth of the comb is reset at a given instant. For complete resetting of the matrix, the comb is moved at least $\alpha - 1$ times so as to scan all of the N rows of the matrix

Art Unit: 2622

and, for each movement of the comb, a new individual resetting operation is performed. The rows in a group of the matrix may be addressed by means of a shift register, which positions an address voltage pointer on a row chosen to be the first row in the group. The n row pointers of the group are positioned by inputting a charging pulse into the shift register every α clock pulses. While the rows of the group are being addressed, no pulse is sent to the rows.

This is a specific definition and is not taught in the prior art along with other claimed limitations and it would not be obvious to be combined along with claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
